

10 THINGS YOU SHOULD KNOW ABOUT THE

CLIMATE CRISIS

It will **keep getting hotter** until we stop burning fossil fuels.

We have functional alternatives to fossil fuels.

In the long run, the alternatives are **CHEAPER** than fossil fuels.

Exxon's scientists predicted the current rate of warming as early as 1977. Instead of acting, **Exxon execs launched a disinformation campaign.**

Fossil fuel companies are **STILL lobbying against climate action.**

Canada is a climate laggard, not a champion.

Canadian banks like **TD, RBC and Scotiabank** pump \$100s of billions into fossil fuels every year.

Burning less fossil fuels would save millions of lives per year worldwide even if global warming wasn't a thing.

The scary part isn't sea level rise, it's **food system collapse.**

To solve this problem we need individual action **AND** system change.
